+91-6300706438 | v.varshith.2004@gmail.com | Bapatla, Andhra Pradesh
linkedin.com/in/varshith-chand-vuyyuru | github.com/VarshithChand

Aspiring DevOps Engineer with a strong foundation in cloud infrastructure, containerization, CI/CD, and automation, building scalable and secure systems using AWS, Docker, Kubernetes, and Jenkins.

EDUCATION

NRI Institute of Technology <i>B.Tech in Artificial Intelligence & Machine Learning</i>	GPA: 8.0 / 10 2026
Sri Chaitanya Junior College <i>Intermediate Education (MPC)</i>	GPA: 6.0 / 10 2022
Sri Chaitanya Techno School <i>SSC Board of Education</i>	GPA: 9.8 / 10 2020

TECHNICAL SKILLS

Languages: Python, C#, JavaScript, YAML

Backend: ASP.NET Core, Flask, Django, REST APIs, JWT & OAuth 2.0 **Frontend:** React, HTML, CSS

Cloud: AWS (EC2, S3, IAM, VPC, EKS, Route 53, ECR), Azure (App Service, DevOps), GCP

DevOps & CI/CD: Jenkins, GitHub Actions, Azure DevOps Pipelines, Docker, Kubernetes, Ansible, Terraform, Prometheus, Grafana

Data & Hosting: PostgreSQL, MongoDB, Render, Cloudflare Workers **Tools & OS:** Git, GitHub, Maven, Linux, Windows

PROJECTS

Deployment Portal | *React, ASP.NET Core, PostgreSQL, GitHub Actions, AWS/Azure/GCP, Docker* 2026

- Built a full-stack internal CI/CD deployment portal (React 19 + Vite, ASP.NET Core) to trigger, monitor, and approve GitHub Actions workflows across environments
- Implemented email/password signup, Google & GitHub OAuth 2.0, JWT sessions, and mandatory TOTP multi-factor authentication
- Integrated AWS, Azure, and GCP cloud service management, container registries, and Docker-based deployments directly into the portal
- Designed role-based (Admin/Viewer) access with an audit log and granular per-page permissions; deployed via Cloudflare Workers, Render, and PostgreSQL

EduVault - Role-Based File Vault | *Python, Flask, MongoDB Atlas, Werkzeug* 2026

- Built a role-based file vault where regular users log in to upload and browse their own files, and a separate superuser dashboard manages every user and every uploaded file across the system
- Used Flask with MongoDB Atlas for storage and Werkzeug for secure file handling and session-based authentication

Self-Hosted DevOps Platform | *Docker, Forgejo, Woodpecker CI, Harbor, Traefik* 2026

- Stood up a full DevOps stack on a single Ubuntu + Docker server: Forgejo for Git hosting, Woodpecker CI for continuous integration, and Harbor as a private container registry
- Configured Traefik as a reverse proxy in front of every service, plus monitoring across the stack

INTERNSHIP & CERTIFICATIONS

- DevOps with AWS (Internship)** — IntelliQ IT Trainings, Hyderabad: Git, Jenkins, Docker, Kubernetes, Ansible, Terraform, AWS, Prometheus, Maven, Python
- Generative AI Internship** — NRI Institute of Technology: prompt engineering, integrating AI APIs with Flask
- AWS Cloud Foundations** — Udemy: EC2, IAM, VPC configuration

SOFT SKILLS

Collaboration with teams · Troubleshooting and root-cause analysis · Documentation · Adaptability · Continuous learning
